Area of interest :AI&ML,DevOps

EDUCATION

• PES University (7th sem)

Bachelor of Technology in Computer Science(AI-ML)

Bangalore, India

Nov. 2022 – Present

SKILLS

Languages: Python, C, Javascript, Bash

Libraries/Frameworks:OpenCV,Tensorflow,Pandas,Numpy,Scikit-Learn,Matplotlib,NLTK,

Tools:Docker,Git,Flask,Linux,AWS,Transformers,Diffusion,LLM's,GenAI,kubernetes,RAG

EXPERIENCE

• Appex PESU

Open Source Contributor

PES University, Bangalore

June 2024 - July 2024

◦ 4D Cardiac Dynamics Modeling and Visualization for Surgical Innovation ([source code](#))

- Developed a 4D heart model to analyze cardiac motion and tissue deformation, enhancing cardiovascular research.
- Integrated autoencoders and CycleGAN architectures to enhance simulation realism

• Appex PESU

Logistics head

PES University, Bangalore

Jan 2024 - Present

◦ App Genesis:

- Organized and led an 24-hour ideathon called Horcrux by AppexClub at PES University, focusing on technical aspects such as mentoring participants on development, providing guidance on coding challenges, and evaluating innovative solutions.

• IOT PESU

Contributor

PES University, Bangalore

Dec 2023 - Present

◦ Few-Shot Image Classification with Meta-Learning (MAML) ([source code](#))

- Achieved an accuracy of 33.81% indicating the potential of meta-learning for image classification.
- Applied the MAML FewShot Learning framework on the Food101 Dataset.

PROJECTS

• Word2Vec([source code](#))

- Implemented Word2Vec (CBOW and Skip-gram) using Python and NumPy.
- Trained custom word embeddings on a large text corpus, achieving meaningful semantic relationships and vector analogies.

• Plant Disease Prediction: ([source code](#))

- Built a neural network in TensorFlow/Keras for plant disease detection from images.
- Enhanced model accuracy by implementing convolutional neural networks (CNNs) alongside advanced techniques like data augmentation and dropout. These methods improved generalization and reduced overfitting.

• Pharmacy Management System: ([source code](#))

- Maintain and manage the records for a pharmaceutical store by improving efficiency, accuracy and security.
- The system will help prevent waste of time and resources, allow easy access to medicines, as well as ensure more security.

Actively participated in multiple intercollegiate hackathons, gaining hands-on experience in real-time problem-solving, cross-functional teamwork, and rapid prototyping using modern development tools.

Certification: [View certificates](#)
